

## Hire Anne Meixner, PhD: Engineering Services

### Electronic Test Consulting Services

Assist technology companies in making appropriate test and manufacturing choices to meet their time to market and revenue goals.

- Provide expertise at engineering design reviews
- Advise on analog/mixed-signal DFT and test strategy
- Work with company engineers in design of empirical experiments to determine validity of new test method approaches
- Identify test technology gaps in 2 to 5-year product roadmaps
- Train design engineers on DFT and Test methods for analog/mixed-signal circuits

- 
- Training on following general topics available: manufacturing and defect detection, introductory statistics
  - Technical writing services include: writing white papers, assist with conference papers, improving current documents, transforming engineering draft documents into readable and actionable documentation

### Technical Program Management

Provide services to enhance your organization's performance. Project specific goals or culture change objectives can be supported

- Document current internal business processes and identify improvement opportunities
- Facilitate face to face meetings. As needed can be involved in preparation and post-meeting report outs
- Work with cross functional teams to gather requirements, define objectives and provide an environment for successful execution
